pause/resume support

- temporarily pause a listener when using ref.listen -

```
final subscription = ref.listen(myProvider, (prev, next) {})
```

```
@override
Widget build(BuildContext context, WidgetRef ref) {
  ref.listen(myProvider, (previous, next) {
    ...
    }
  });

  ...
}
```

- `ref.listen` inside provider
- `ref.listenManual` inside initState, etc.

```
subscription.pause() / subscription.resume()
```

- for efficiency at the system level
  - visibility-based pausing
  - pause during rebuild
  - cascading suspension

Auto-Save System

```
final subscription = ref.listen(textProvider, (prev, next) {
  _autoSaveToServer(next);
});

void onLoadDraft(String draftContent) {
  subscription.pause();

  ref.read(textProvider.notifier).setContent(draftContent);

  subscription.resume();
}
```
