```dart
@riverpod
class Signup extends _$Signup {
  Object? _key;

  @override
  FutureOr<void> build() {
    _key = Object();
    ref.onDispose(() {
      _key = null;
    });
  }

  Future<void> signup({
    ...
  }) async {
    ...
  }
}
```

Ref.mounted

```dart
Future<void> signup({
  required String name,
  required String email,
  required String password,
}) async {
  state = const AsyncLoading<void>();
  final key = _key;

  final newState = await AsyncValue.guard<void>(
    () => ref
        .read(authRepositoryProvider)
        .signup(
          name: name,
          email: email,
          password: password),
  );

  if (key == _key) {
    state = newState;
  }
}
```

```
@riverpod
class Signup extends _$Signup {
  @override
  FutureOr<void> build() {}

  Future<void> signup({
    ...
  }) async {
    state = const AsyncLoading<void>();

    final newState = await AsyncValue.guard<void>(
      () => ref
          .read(authRepositoryProvider)
          .signup(name: name, email: email, password: password),
    );

    if (ref.mounted) {
      state = newState;
    }
  }
}
```
