```dart
void main() {
  runApp(
    ProviderScope(
      retry: (retryCount, error) => null,
      child: const MyApp(),
    ),
  );
}
```

```
void main() {
  runApp(
    ProviderScope(
      // You can customize the retry logic, such as to skip
      // specific errors or add a limit to the number of retries
      // or change the delay
      retry: (retryCount, error) {
        if (error is SomeSpecificError) return null;
        if (retryCount > 5) return null;

        return Duration(seconds: retryCount * 2);
      },
      child: MyApp(),
    ),
  );
}
```

```
Duration? myRetry(int retryCount, Object error) {

  if (error is SomeSpecificError) return null;

  if (retryCount > 5) return null;

  return Duration(milliseconds: 200 * (1 << retryCount));
}

@Riverpod(retry: myRetry)
class TodoList extends _$TodoList {
  @override
  List<Todo> build() => [];
}
