```
final addTodoMutation = Mutation<void>();
final updateTodoMutation = Mutation<void>();
final deleteTodoMutation = Mutation<void>();
```

non-void type T, S, R

```
final addTodoMutation = Mutation<T>();
final updateTodoMutation = Mutation<S>();
final deleteTodoMutation = Mutation<R>();
```

mutations.dart

```
sealed class MutationState<T> {}

class MutationIdle<T> extends MutationState<T> {}

class MutationPending<T> extends MutationState<T> {}

class MutationSuccess<T> extends MutationState<T> {
  final T value;
}

class MutationError<T> extends MutationState<T> {
  final Object error;
  final StackTrace stackTrace;
}
```

```
ref.listen<MutationState<Todo>>(addTodoMutation, (prev, next) {
  if (next case MutationSuccess(value: final todo)) {
    ScaffoldMessenger.of(context).showSnackBar(
      SnackBar(content: Text('Created: ${todo.id}')),
    );
    Navigator.pop(context, todo);
  }
});
```

```
final todo = await addTodoMutation.run(ref, (tsx) async {
  return createdTodo;
});

print(todo.id);
```
