

ChangeNotifierProvider

- ChangeNotifier is a class provided by the Flutter
- a provider that allows you to expose and listen to a ChangeNotifier subclass
 - the most important provider in provider package created by Remi
- For handling complex business logic
- the state provided by ChangeNotifierProvider can be changed from outside directly

ChangeNotifierProvider

- Not recommended
 - Easy migration from the apps using provider package to the apps using riverpod package
 - Support the cases where mutable state is preferred
 - Packages like go_router before version 9
 - Code generation not available
- Recommended
 - NotifierProvider
 - AsyncNotifierProvider
