

enum based state

```
@override
void initState() {
  super.initState();
  Future.delayed(Duration.zero, () {
    ref.read(enumActivityProvider.notifier).fetchActivity(activityTypes[0]);
  });
}
```

sealed class based state

```
@override
void initState() {
  super.initState();
  Future.delayed(Duration.zero, () {
    ref.read(sealedActivityProvider.notifier).fetchActivity(activityTypes[0]);
  });
}
```

```
final userList = ref.watch(userListProvider);

userList.when(
  data: (users) {
    ...
  },
  error: (e, st) {
    ...
  },
  loading: () {
    ...
  },
);
```

The state of [Notifier](#) is expected to be initialized synchronously.
For asynchronous initializations, see [AsyncNotifier](#).
